

IEEE JOURNAL OF BIOMEDICAL AND HEALTH INFORMATICS

J-BHI Special Issue on “AI-Generated Content-Based Healthcare - Transforming the Landscape of Patient Care and Medical Services”

Artificial intelligence and content-based healthcare are evolving rapidly, presenting substantial opportunities for researchers, developers, and industry experts to explore innovative concepts and redefine the limits of what is possible in the healthcare sector.

One of the most fascinating aspects of this convergence is the potential for AI-generated content to improve patient care and streamline medical services. As AI-driven systems advance and become more sophisticated, they can provide novel ways to assist healthcare professionals in diagnostics, treatment planning, and patient monitoring. For example, AI-powered diagnosis and treatment recommendations, automated medical imaging analysis, and personalized medicine through AI-generated content can all contribute to better healthcare outcomes and more efficient practices.

Another crucial component of this integration is the potential for innovative methods of communication and patient engagement within the healthcare system. Through AI-generated content, patients can receive personalized health information and educational materials, opening new possibilities for self-care, adherence to treatment plans, and overall well-being. Natural language processing can also facilitate more effective communication between healthcare professionals and patients, leading to better patient experiences.

However, these new opportunities come with challenges and risks. Privacy and security are critical factors to consider when implementing AI-generated content in healthcare, as patients' sensitive information and medical data could be vulnerable. Additionally, ethical concerns must be addressed when developing and deploying AI-driven systems that could significantly impact patient care and medical professionals' decision-making processes.

To examine these opportunities and challenges, it is essential to develop responsible solutions that enhance patient care and healthcare efficiency while ensuring privacy, security, and ethical considerations. This special issue will focus on the intersection of AI-generated content and healthcare, with an emphasis on how these innovative systems can transform the landscape of patient care and medical services.

We invite authors to submit original research articles, review articles, case studies, and innovative applications related to AI-generated content-based healthcare.

Focus (topics/focus areas)

The list of possible topics includes, but is not limited to:

1. AI-powered diagnosis and treatment recommendations
2. Automated medical imaging analysis and interpretation
3. Personalized medicine through AI-generated content
4. Natural language processing for healthcare communication
5. AI-driven health monitoring and prediction
6. Data-driven health education and patient engagement
7. Ethical considerations, privacy, and security in AI-generated healthcare content
8. Integration of AI-generated content in electronic health records
9. AI-assisted decision-making in healthcare management
10. AI-generated content for mental health and well-being

Guest Editors

Key Dates

Deadline for Submission: 01 May, 2024

First Reviews Due: 01 Jul, 2024

Revised Manuscript Due: 01 Sep, 2024

Final Decision: 01 Oct, 2024
