

# Preparation of Science Manuscripts for the IEEE Open Journal of Engineering in Medicine and Biology (OJEMB)

**First A. Author, Fellow, IEEE, Second B. Author, and Third C. Author\*, Jr., Member, IEEE**

Include here the authors' current affiliations and financial support acknowledgment

1National Institute of Standards and Technology, Boulder, CO, USA

2Rice University, Houston, TX, USA

3Colorado State University, Fort Collins, CO, USA

CORRESPONDING AUTHOR: Third C Author (e-mail: author@uoc.edu)

This work was supported in part by the U.S. National Science Foundation under Grant BS123456

This article has supplementary downloadable material

## Abstract

**ABSTRACT** The abstract should not exceed 150 words. It should briefly summarize the content of the paper and address the following points. Objective: Briefly state the problem or issue addressed, in language accessible to a general scientific audience. Results: Provide a brief summary of the results and findings. Conclusions: Give brief concluding remarks on the study outcomes. Please notice that this is the template for SCIENCE MANUSCRIPTS. These are manuscripts with primary focus on reporting scientific results of relevance to the field of biomedical engineering. The material must be organized in a main manuscript body and a section entitled Supplementary Materials. The main manuscript body should be limited to 3,000 words and the material should be organized in the following sections (in the order shown here): Introduction, Results, Discussion, Conclusions, Materials and Methods. Authors can include in the main manuscript body up to 8 display items (i.e., figures and tables). In addition, the main manuscript body should include an abstract and up to 50 references. The references are not considered in the 3,000-word count. The abstract should be organized in subsections as shown here (i.e., Objective, Results, Conclusions). A significance statement should be included. The significance statement should be a short paragraph of no more than 30 words. Additional material should be included in the Supplementary Materials section of the manuscript. The Supplementary Materials section should either be organized in sections as per the main manuscript body (using up to 4,000 words) or it should be used to provide readers with a set of up to 10 additional display items (i.e. figures and tables).

**INDEX TERMS** Enter up to 5 keywords in alphabetical order, separated by commas.

**IMPACT STATEMENT** The authors should include here a significance statement of no more than 30 words. The statement should summarize the main findings of the research work reported in the manuscript.

## I. INTRODUCTION

**T**HIS document is a Microsoft Office Word template for Science Manuscripts to be submitted to IEEE OJEMB. Submissions must have the sections listed in the following in the order shown here: Introduction, Results, Discussion, Conclusions, Materials and Methods. Manuscripts to be submitted as Technology Manuscripts must use a different template. For both types of manuscript, the authors can opt to add a Supplementary Materials section.

style will adjust your fonts and line spacing. Do not change the font sizes or line spacing to squeeze more text into a limited number of pages. Use italics for emphasis; do not underline. IEEE will do the final formatting of your paper. However, you should format your manuscript for submission to IEEE OJEMB for review and also for preparing for preprint that will be e-published several days after you upload the final version of an accepted manuscript.

## II. RESULTS

To use this template, type over sections of the template or cut and paste from another document. Highlight a section that you want to designate with a certain style, then select the appropriate name on the style menu. The

## III. DISCUSSION

If you are using *Word*, use either the Microsoft Equation Editor or the *MathType* add-on (<http://www.mathtype.com>) for equations in your paper (Insert — Object — Create New — Microsoft Equation

or MathType Equation). “Float over text” should *not* be selected.

#### A. Equations

Number equations consecutively with equation numbers in parentheses flush with the right margin, as in (1). First use the equation editor to create the equation. Then select the “Equation” markup style. Press the tab key and write the equation number in parentheses. To make your equations more compact, you may use the solidus (/), the exp function, or appropriate exponents. Use parentheses to avoid ambiguities in denominators. Punctuate equations when they are part of a sentence, as in

$$\int_0^{r_2} F(r, \varphi) dr d\varphi = [\sigma r_2 / (2\mu_0)] \int_0^{+\infty} \exp(-\lambda |z_j - z_i|) \lambda^{-1} J_1(\lambda r_2) J_0(\lambda r_1) d\lambda \quad (1)$$

Be sure that the symbols in your equation have been defined before the equation appears or immediately following. Italicize symbols (T might refer to temperature, but T is the unit tesla). Refer to “(1),” not “Eq. (1)” or “equation (1),” except at the beginning of a sentence: “Equation (1) is ... .” A general IEEE styleguide is available at <http://www.ieee.org/web/publications/authors/transjnl/index.html>

### IV. CONCLUSION

A conclusion section is required. Although a conclusion may review the main points of the paper, do not replicate the abstract as the conclusion. A conclusion might elaborate on the major findings and significance of the work or suggest applications and extensions. Do not exceed 300 words for the conclusion section.

#### A. Sizing of Graphics

Most charts, graphs, and tables are one column wide (3.5 inches / 88 millimeters / 21 picas) or page wide (7.16 inches / 181 millimeters / 43 picas). The maximum depth a graphic can be is 8.5 inches (216 millimeters / 54 picas). When choosing the depth of a graphic, please allow space for a caption. Figures can be sized between column and page widths if the author chooses; however, it is recommended that figures are not sized less than column width unless when necessary.

#### B. Accepted Fonts Within Figures

When preparing your graphics IEEE suggests that you use one of the following Open Type fonts: Times New Roman, Helvetica, Arial, Cambria, and Symbol.

#### C. Using Labels Within Figures

1) *Figure Axis labels:* Figure axis labels are often a source of confusion. Use words rather than symbols. As an example, write the quantity “Magnetization,” or “Magnetization M,” not just “M.” Put units in parentheses. Do not label axes only with units. As in Fig. 1, for example, write “Magnetization (A/m)” or “Magnetization (A m1),” not just “A/m.” Do not label axes with a ratio of quantities and units. For example, write “Temperature (K),” not “Temperature/K.” Figure labels should be legible, approximately 8 to 10 point type.
